

Amendments to the Specification

Please amend the paragraph on page 19, lines 1-6, of the original disclosure as shown below:

By having multiple local loudspeakers, and assuming that their locations relative to the plant 71 were known to the voice browser system, the voice browser or other means used to provide audio output control, can control the volume from each speaker in dependence on the relative positions of the user and the entity to make it appear as if the sound output was coming from the plant at least in terms of azimuth direction. This is particularly useful where there are multiple voice-enabled dumb entities in the same area.

Support for this amendment can be found in original claim 12.
